

TUBERIA DE PVC-CALIDAD PRESIÓN.Unión soldada.

Fabricado según Norma UNE-EN 1452

Marca de calidad AENOR

Color Gris RAL 7011

Longitud estándar: 5 mts. hasta Ø 63 y 6 mts desde I 75

Abastecimiento de agua: desde Ø 20 hasta Ø 90mm y en todas la presiones nominales. Marcado W

Saneamiento con presión y abastecimiento de agua: desde Ø 110 hasta Ø 315mm y en todas la presiones nominales. Marcado W + P

TUBERIA DE PVC PARA PRESIÓN Unión con junta elástica.

Fabricado según Norma UNE-EN 1452

Marca de calidad AENOR

Color gris RAL 7011

Longitud estandar: 6 mts.

Abastecimiento de agua: desde Ø63 hasta Ø90 y en todas la presiones nominales. Marcado W

Saneamiento con presión y abastecimiento de agua: desde Ø 110 hasta Ø630 y en todas la presiones nominales. Marcado W + P

SISTEMA DE PRESIÓN PVC BIORIENTADO

¿Qué es el PVC-O? El PVC es un polímero cuyas moléculas se orientan aleatoriamente. En el **PVC-O** se consigue, bajo determinadas condiciones de presión - temperatura - velocidad, y estirando el material, ordenar las moléculas. De esta forma se obtiene una **estructura laminar** (a capas) que **mejora significativamente las propiedades físicas y mecánicas del PVC**, confiéndole unas características excepcionales y unas extraordinarias ventajas competitivas adicionales, manteniendo a su vez los atributos de la materia prima de origen.

PVC Biorientado. EL PROCESO DE BIORIENTACIÓN. Se realiza mediante una tecnología de estiramiento de las moléculas del polímero (PVC) bajo determinadas condiciones. Este estiramiento se puede dar en una o en dos direcciones. **En las tuberías de PVC Biorientado GPF Biopipe® el estiramiento se realiza en dos direcciones: radial y axial.** De esta manera se obtiene un sistema de **PVC Biorientado**, lo que confiere al tubo unas prestaciones superiores y una mayor resistencia.

Campos de aplicación

- SISTEMAS ABASTECIMIENTO AGUA POTABLE A PRESIÓN
- SISTEMAS DE RIEGO
- SISTEMAS DE SANEAMIENTO CON PRESIÓN
- OTRAS APLICACIONES ENTERRADAS PARA USO DE AGUA NO POTABLE CON PRESIÓN (reutilización de aguas regeneradas, redes contraincendios...)

Las tuberías de PVC Biorientado GPF Biopipe® se fabrican con MRS 50, lo que supone la clasificación más exigente: Clase 500

Características técnicas. Las tuberías de PVC Biorientado **GPF Biopipe®** se fabrican según la norma **UNE ISO 16422** ("Tubos y Uniones de poli (cloruro de vinilo) orientado (PVC-O) para conducción de agua a presión") y la futura norma europea **pREN 17176** que se publicará próximamente. La actual normativa relativa al PVC-O contempla distintas clasificaciones en base a la **Resistencia Mínima Requerida (MRS)**. Este valor se determina realizando un análisis de regresión de los datos de ensayo de **presión hidrostática a largo plazo**, de acuerdo con la norma ISO 9080. El análisis de regresión permite predecir la resistencia mínima para una vida útil específica. Los datos se extrapolan para predecir la resistencia mínima a 20°C y la vida útil especificada de 50 años.

VÁLVULAS DE ESFERA COMPACT EN PPVF.

Las válvulas compact han sido sometidas a test de resistencia a temperaturas extremadamente bajas, superando con resultados satisfactorios exposiciones a -18°C y pruebas de presión posteriores, gracias a la elección de los materiales de fabricación.
